
BHRIGU / Frey

Clean Brief Publication

Repaired candidate - text-first, no old poster layers, no public attach.

date -> metric -> signal -> meaning -> direction

What Frey is

BHRIGU / Frey is not a chatbot, not a horoscope, and not a prediction engine.

It is a structured temporal reading interface. It helps transform a date, moment, or question-shaped temporal focus into a readable field: state, rhythm, tension, and direction.

The public route

/frey -> /reading -> /access

- /frey is the quick temporal input layer.
- /reading is the meaning and interpretation layer.
- /access is the reviewed deeper entry.

How to read the response

A Frey response should be read as a structure, not as a command.

The correct movement is State -> Meaning -> Direction. Direction is not an order and not a promise. It is a careful vector of attention.

Compare / Delta

One date opens a state. Two dates open a transition.

Compare / Delta is a map of change, not a ranking of better and worse days.

AI Read Protocol

Frey output can be passed to an AI as structured context. It must not be treated as a prophecy, final authority, or deterministic instruction.

A useful AI reading preserves the structure, connects the metrics, avoids certainty amplification, and keeps human judgment central.

Boundary

BHRIGU / Frey is not financial, medical, legal, trading, or deterministic life advice.

It helps transform time from a vague feeling into a readable field.
